

Amendments to the Specification:

Please replace the paragraph beginning at page 5, line 16, with the following redlined paragraph:

The illustrated artistic pane 100 has a pair of opposing short sides 102 and a pair of opposing long sides 104. The short sides 102 and the long sides 104 combine to form a rectangular margin 106 extending around the perimeter of the artistic pane 100. The margin 106 is generally planar, and is sufficiently flat to be received in a traditional window frame or a came for a decorative window. As illustrated in Figure 2, the margin 106 has a depth d from the respective side 102/104 inward toward a central portion 108 of the artistic pane 100. In the illustrated embodiment, the depth d of the margin 106 measures approximately $\frac{1}{8}$ inch, although the depth can vary to be suitable for a particular application, without deviation from the spirit of the invention.
